MultiShopper and UltraShopper bags

Innovative reusable bag made completely by automated equipment. Very strong (can hold up to 80 kg), with attractive prices for quantities more than 5000 pcs.

MultiShopper bags

UltraShopper bags

100 % machine made nonwoven bag with ultrasonic bonding. Big bag with large bottom up to 25 cm.

PP Woven/ Non Woven bags

The PP Woven/ Non Woven bags manufactured by us are highly customized and capable to meet client's specific requirements. The bags are suitable for multiple use. They are lightweight and have strong carrying capacities. For nicer finish, mat or gloss lamination is an option. They are 100% recyclable and cheaper than bags made of other materials, which makes them a very popular choice on the market. So if you are looking for a durable and eco-friendly bag to promote your brand, these bags are an excellent choice.

long handles

DOS printed Non Woven PP bags

These bags have a high quality printing and easy to clean anti-bacterial coating inside. They are made from non-woven PP and can be used repeatedly. The printing is applied directly on the fabric without lamination.

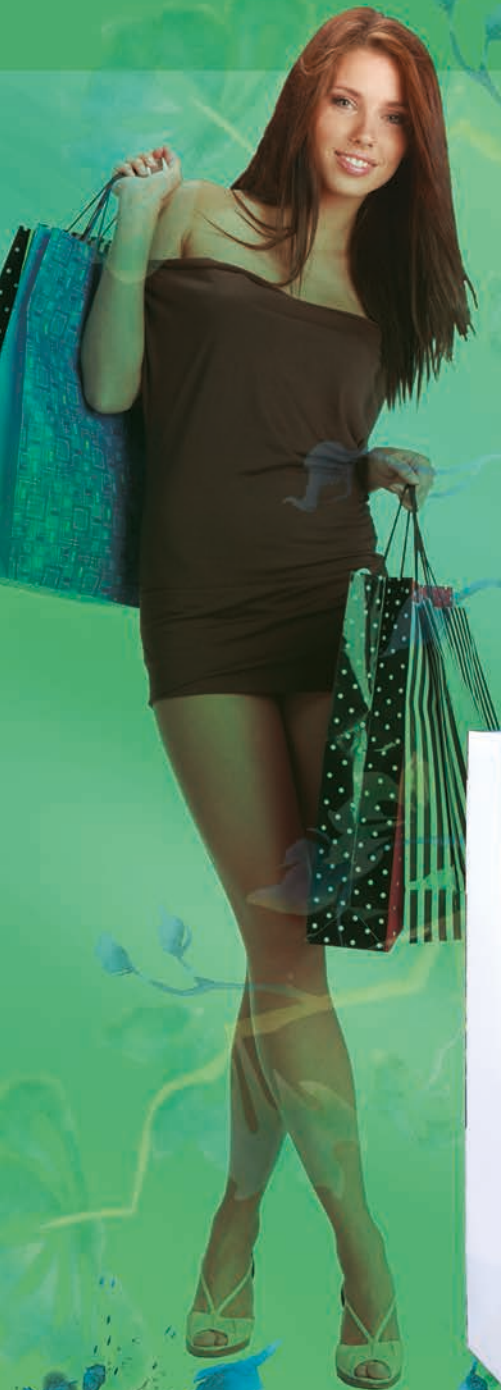

In DOS printing is not required the construction of a cliché, which makes this model very profitable in circulation under 3000 copies.

Bags with screen printing

Luxury paper bags

Luxury paper bags

You can add value to your brand, using our classic hand-made paper bags. We are manufacturing variety range of sizes, using different papers, with many possible extras for added value.

Take Away bags

The Paper Take Away bag is made from white or brown paper and has 2 paper flat handles. Because of the large bottom this paper bag has extra volume comparing to other standard paper bags. The Paper Take Away bags are often used in fast food restaurants, delicatessen shops, sushi shops, chocolate stores. If you are looking for an alternative for the plastic t-shirt bag, the Paper Take Away bag is the perfect alternative.

Flat bottom paper bags

Flat bottom paper bags are suitable for baked goods, pasta, medicines, and other products. They can be made of 40 g/m² kraft paper, natural or white color.

Soft loop handle bags

Very common used in shopping malls, soft loop handle bags are durable, beautiful and practice. We are manufacturing this type of bags in varied polymer materials, colours, sizes, etc.

Patch handle bags

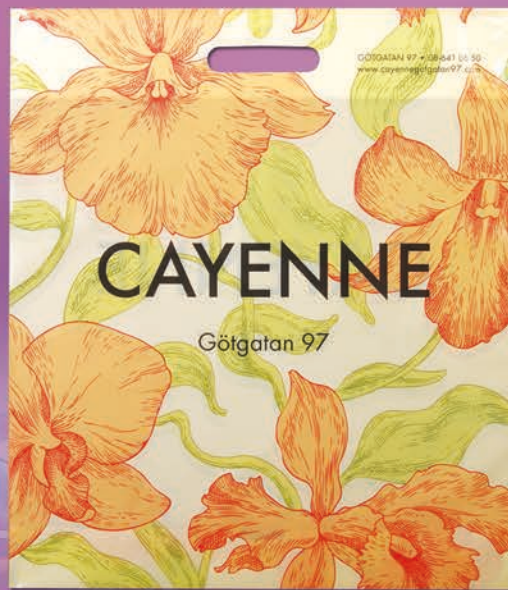

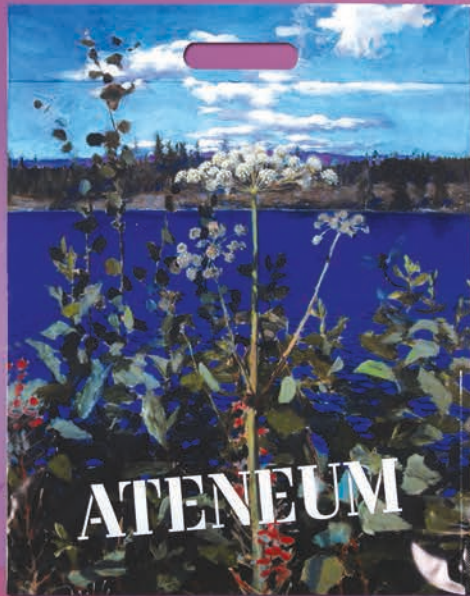

tear-off coupon

We are manufacturing patch handle bags with glue or thermal reinforcement. They are very popular for clothing and gift items. We offer varied sizes and extras to make your bags unique.

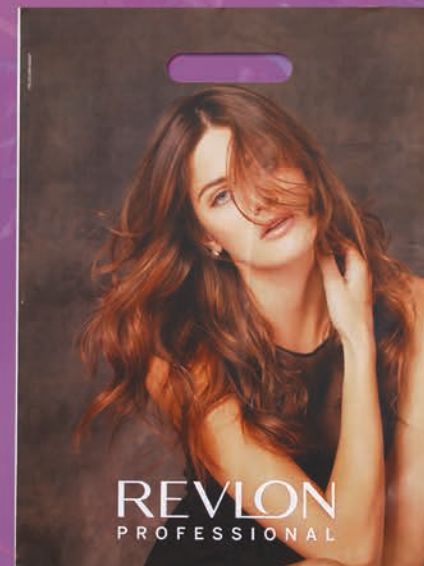

Turn-over top bags

The handles of these bags are cut into the turnover top, which makes them stronger. They may have a bottom gusset if requested.

Die cut bags

Die cut bags are very useful for trade shows, promotional events and shopping purposes. We offer high definition printing and varied sizes and materials for that bags type.

Isothermal bags

Ideal to carry hot or frozen food and beverages, our Isothermal bags are solid, eye-catch looking and non-expensive. They have clip-on handles with strong closure, and multilayer structure to prevent heat exchange with the environment.

Non woven promotional suit cover

Extrapack produces garment covers made from non woven polypropylene. They have a central, full-length zipper and a hole in the top for hangers. Silk screen printing or embroidery can be used on these bags for branding.

PP

Courier & e-commerce bags

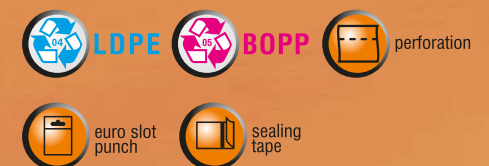

We are manufacturing strong and functional courier bags. As standard they are made by co-extruded polyethylene, and they can have permanent sealing tape, transparent pocket for bill, and perforation for easy opening.

Bags with euro slot

We offer a range of bags ideal for retail display purposes with euro-slot hanger or POS hole and a lateral seal if required.

Packaging bags

We offer varied packaging bags, which are usable in many business fields. For example bags for tires, for foods, for chemicals, laundry bags, etc.

Signal tapes

Caution tapes are frequently used in the fields of law enforcement, event's exterior design, safety, construction, painting, mining, hardware and utilities.

Extras

long handles

Long handles are very suitable for carrying bag over your shoulder. We offer varied colours and materials such as polyester, polypropylene and cotton.

eyelets for handles

The **Eyelets** are both stylish and functional - they reinforce handle holes. We offer metallic, white or coloured eyelets. Eyelets are more applicable for plastic luxury bags.

mat/gloss lamination

Lamination is common used surface finishing process, which adds luxury appearance to packagings. We offer both gloss or matt lamination on paper, PP woven and plastic bags.

UV varnish

Very often used in printed media as magazines and packagings, **UV zone varnish** is right way to focus attention on your products. We offer regular and relief UV varnish, as well as pearlescent (with pearl particles inside).

hot stamping

Hot stamping is a dry printing method in which a heated die and foil are used to apply graphics to a surface. Although it is used to imitate gold/silver printing, we offer several other colours.

embossing

We offer ribbed **Embossing** on the paper bags. It gives ripple effect on bag's surface. Other option is Embossed logo or relief.

inside printing

In some cases, especially for brand protection, you can add **Printing inside bags**. This makes your bags unique.

inkjet marking

Inkjet marking. You can add unique mark on your bags with this option. Very usable for promotional codes, dates, bar-codes, etc.

tear-off coupon

The **Tear-off coupon** is configured with the rest of the bag for rapid production and easy detachment from the bag. The coupons are separable from the bag portion due to perforations.

perforation

In many cases **Perforation** can help your customers to open the bags. It's recommended for packaging and security bags. We offer perforations with different tearing effort.

euro slot punch

Euro-slot punches will allow you to create the euroslot shape in your stock in order to display on a variety of hook and slot shape retail shelving.

transparent pocket

Transparent pocket. They are commonly used for the insertion of waybill or consignment notes. The transparency making it possible for bar code scanning.

Materials

LDPE

LDPE (Low Density Polyethylene) - This is the oldest type of polyethylene, which is used for plastic bags. LDPE has good transparency and seal ability. It's common used for Patch Handle Bags, Soft Loop Handle Bags and Die Cut Bags. In North Europe LDPE is still used for T-shirt bags. We can extrude LDPE films with thickness between 18- 180 micr.

HDPE

HDPE (High Density Polyethylene) - HDPE is stronger than LDPE on stretching, but it tears easily. This material is highly suitable for T-shirt bags and Die Cut bags. Also, the thick HDPE (50-90 micr.) is often used for fashion bags. Naturally HDPE is lustreless. The prices of HDPE and LDPE are very often changed on the market. We can extrude HDPE films with thickness between 8- 100 micr.

CoEx

CoEx - We offer 3 layer plastic films for customers, who needs a special characteristic for their packaging. Common use is to make different film colours inside/outside, to increase durability, sealing properties, thermal stability and many other properties.

Degralen

Degralen - It is similar to LDPE and HDPE, but there is additive which makes bag to degradate in presence of oxygen in the nature. The Degralen bags can be used approximately for an year if they are kept in dry, cool storage.

ecomater®

Ecomater - It is based on polylactose from corn. Ecomater bags are biodegradable only in compost environment. Bags made by Ecomater meet the European standard for compostability EN13432

Granilen

Granilen - Brand new eco material, with increased content of selected chalk. Using it, you reduce the primary material. Suitable for LD bags, up to 50 micr.

BOPP

BOPP (Bi-axially Oriented Polypropylene) - BOPP is a well-known material for food packaging. Snacks, sugar and many other foods are packed in BOPP films. It has super transparency, very high resistance on stretching, but it can breaks very easy. The BOPP by itself is not suitable for advertising bags. From 30 micr. BOPP we usually produce envelopes and special bags. BOPP has different varieties as lustreless and metallized BOPP, that are often used for laminated films

PP

Woven PP - We offer to our clients bags made of woven polypropylene fabrics. It is the strongest material available for bags manufacturing.

Non Woven PP is a material made from long fibres, bonded together by heat and pressure. Non Woven fabrics can be recycled after use. Woven and Non Woven PP bags are offered with lamination - gloss or mat and high definition flexo printing.

Paper

Paper - Paper is well known material with long history of using in bags manufacturing. We are using the following kind of papers:

- Kraft, white or brown, plain or ribbed;
- One side coated paper;
- Two sides coated art paper.

Kraft paper features strength combined with natural paper look and feel. Coated grades of paper distinguish superior print quality.
